

— THE EXECUTIVE COMMITTEE —

Brian O'Halloran

Technology Director

Brian advises the Officers on technology infrastructure, Member data security, communications systems, and what he refers to as "matters of artificial cognition." He has consulted with The Society since its founding in 1999.

Professionally: Brian began his career as a Senior Manager at Andersen Consulting (now Accenture) in the late 1990s, where he led network architecture engagements for several Chicago institutions. He currently runs a private security consultancy headquartered in the former Amoco Building. The firm's exact specialty is the subject of mild speculation among the Officers but is generally described as "*the kind of work that does not appear on a website.*"

Brian is the architect of The Society's original 1999 website (retired in 2024) and oversees all current digital initiatives — including *The Atlas*, the Society's mobile platform. He directly advises the board on fast WiFi, security, and AI.

Originally from Rogers Park, Brian lives in a compound on the south side of Webster, just west of Halsted. The compound is, by his admission, networked.

Current Initiatives

- lptribie.com V6 — current project; full redesign, CMS integration, and digital archive restoration across 25 years of Society output
- Legacy Site Preservation Initiative — converting the 2001–2024 website archive into a structured historical record accessible to future Board
- Member Data Sovereign Infrastructure — evaluating a private-cloud architecture for Member records that does not touch any server the Society did not personally approve
